

SITUATION: LASSA FEVER OUTBREAK	LOCATION: LIBERIA
DATE OF REPORT: FEB 16, 2024	OUTBREAK START D ATE: JAN 6, 2022
REPORTING PERIOD: FEB 10-16, 2024	SITREP NO: 90

### **HIGHLIGHTS**

- No new confirmed case reported
- All contacts have completed 21 days follow up
- Cumulative Case Fatality Rate (CFR): 30% (42/139)
- One county currently in outbreak (countdown)

### SITUATIONAL CONTEXT

Lassa fever is a major public health concern in Liberia and West Africa at large. To date, eight (8) out of the fifteen (15) counties (Bong, Grand Bassa, Nimba, Margibi, Lofa, Montserrado, Grand Kru, and River Gee) have reported confirmed cases. Bong, Grand Bassa, and Nimba counties are endemic, while Margibi, Lofa, Montserrado, Grand Kru, and River Gee have reported sporadic cases.

In 2021, the country experienced 12 outbreaks including 25 laboratory-confirmed cases with 15 deaths accounting for a 60% case fatality rate (CFR). These outbreaks generated 325 contacts of which 196 were healthcare workers (HCWs).

From January 6, 2022 to present, we recorded 12 outbreaks. The ongoing outbreak, which started January 6, 2022, in Bong County, has recorded 139 laboratory-confirmed cases including 42 deaths (CRF 30%). A total of 1085 contacts were recorded including 469 healthcare workers.

#### **Public Health Interventions**

Since the inception of the 2022 outbreak, several measures including response initiatives have been instituted including surveillance and laboratory testing, vector surveillance and control, case management, etc. These interventions aim to protect at-risk populations; prevent international spread; containing outbreaks rapidly. Below are details of the measures taken in the ongoing outbreak:

#### I. Coordination

• National Public Health Institute of Liberia (NPHIL) and the Ministry of Health (MOH) are providing technical and logistical support to County Health Teams with support from partners.

# II. Epidemiological Surveillance

- Active case search and contact tracing ongoing in affected communities and districts
- Development and dissemination of weekly SitReps by affected counties

### III. Laboratory

- The National Public Health Reference Laboratory continues testing of Lassa fever samples
- Total of 139 Lassa fever cases have been confirmed since this outbreak

# IV. Case management and IPC

- Cases are being isolated and managed at designated facilities
- Ribavirin supply in country and being distributed for treatment of Lf cases to affected counties

Deputy CSO providing technical and support to the ongoing Lassa fever outbreak, JDF Hospital, Tappita, Nimba county, 18 January 2024

#### V. Environmental and Vector Control

• Ongoing clean-up campaigns and rodent control measures in affected communities

### VI. Risk Communication and Community Engagement

• Risk communication and community engagement ongoing in affected and surrounding communities

### VII. Dead Body Management

Safe and dignified burial conducted for a diseased suspected case in Tappita District

Safe and dignified burial for suspected Lassa fever, JFD Hospital, Tappita, Nimba County, 24 January 2024

# VIII. Key Challenges

- Late arrival of cases at health facilities
- Limited number of trained clinical staff for case management (Bong and Nimba)
- Limited supply of IPC materials in affected counties
- Inadequate IEC materials for community sensitization
- Limited logistics (communication cards, fuel, etc) to support contact tracing in affected county
